Case Study
Exeter Cricket Club
Attenuation System Installation

Location:
Exeter Cricket Club
Prince of Wales Road
Exeter
EX4 4RP

Client:
Yelverton Properties Ltd

Contractor:
Midas Construction

Installer:
Stormwater Management Ltd

Stormwater Management Ltd were selected by Midas Construction to install and line an attenuation system for a new pavilion at Exeter Cricket Club using their Aquablock® 1mm LLDPE Membrane and Flowtex protection fleece.

The project involved installing two attenuation tanks close to building structures, as such it was paramount that the systems were 100% watertight to eliminate potential risk of subsidence caused by defective lining of the geocellular tanks. Stormwater Management Ltd recommended the use of a fully welded 1mm LLDPE Aquablock® geomembrane and 300 gsm non-woven Flowtex protection fleece.

Stormwater Management Ltd’s installation package included for all welded joints to all seams and pipe penetrations. Using only TWI certified installers, Stormwater Management Ltd offered a fully warranted installation service and a quick and efficient turnaround on the project to accommodate Midas Constructions tight construction schedule.
